
COMPANY PROFILE

Chromascope Invites You to its New Offices in Antwerp

Chromascope Cape, the colour grading and fluorescence device company has moved to brand new offices in Antwerp. Launched five years ago, the Chromascope Cape was developed by Eva Van Looveren and her father who have both been familiar with the Antwerp diamond industry for many years.

Collaborating with an engineering company which sets up the D to K colour facilities, Chromascope gives an accurate colour grading for rough stones within just a few seconds. Yellow fancy rough diamonds are also measurable. This device has become essential for many rough dealers. Chromascope Cape has always been user friendly and particularly easy to carry (maximum 1 kg).

Director, Chromascope Cape

Chromascope aims to become more visible in the diamond area of Antwerp in 2009. Big screens are already being displayed in their windows and new plans regarding greater exposure and publicity have been developed.
